 Title: System and Method for Transferring Computer Readable Objects Across A
 Remote Boundary

DECLARATION UNDER 37 C.F.R. §1.131

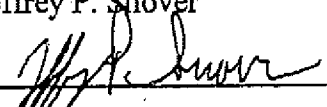

As a below named inventor, I hereby declare that:

I am an inventor of the subject matter which is claimed and for which a patent is sought in the application entitled "System and Method for Transferring Computer Readable Objects across a Remote Boundary," as identified above.

I conceived the invention in the United States prior to the January 9, 2004 filing date of U.S. Publication No. US2005/0154978 to Albornoz et al (hereinafter, "Albornoz publication").

Attached to this declaration is evidence documenting that the invention was conceived prior to the January 9, 2004, which predates the filing date of the Albornoz publication. In particular, that evidence includes redacted portions of a first page of an "Administrative Summary" dated December 26, 2003. That document refers to a meeting on December 11, 2003 when the invention was discussed with the inventors. The evidence also includes a first page of a "Disclosure Packet" dated December 1, 2003. This document refers to the date of conception as being "04/03" (i.e., April of 2003). Diligence toward reduction to practice is evidenced by the subsequent filing date of this U.S. Patent Application, which was filed on January, 16 2004.

1 All statements made herein of my own knowledge are true and that all
2 statements made on information and belief are believed to be true; and further that
3 these statements were made with the knowledge that willful false statements and the
4 like so made are punishable by fine or imprisonment, or both, under Section 1001 of
5 Title 18 of the United States Code and that such willful false statement may
6 jeopardize the validity of the application or any patent issued therefrom.

Title: Monad Serialization

[REDACTED]

[REDACTED]

Component/Subcomponent: ODP – Commercial User Experience

Summary: It is desirable for an object-based command line system management tool, such as Monad, to function in a consistent way across a remote boundary (cross application-domain or cross-process or cross-machine). The invention provides a mechanism to reliably transfer objects across the boundary to ensure their usefulness. Monad implements serialization in an arbitrary object transfer protocol across remote boundaries.
